Focus and Scope

IJSCM's distinctive emphasis is on the management of operations and supply chains. Accordingly, the aim of IJSCM is to enhance the field of SCM and develop generalizable theory, typically through the identification, analysis, and theorization of real SCM/OM problems. IJSCM seeks research that can help the audience develop a better conceptual base for understanding SCM/OM. The focus of articles for IJSCM should be on the managerial situation or the theory being studied rather than the solution techniques being developed or used. Highest priority is thus given to studies that are anchored in the real world and build, extend or test generalizable theories or frameworks of managerial significance. Most often such studies result from identifying an actual, new managerial situation for which existing theory is inadequate, thereby resulting in an addition to theory or testing multiple theories against actual managerial situations to determine their relevance.

General topics covered by the journal, while not exclusive, include the following:

- Supply Chain processes in manufacturing and service organizations
- Upstream supply management
- Downstream demand management
- Supply Chain strategy and policy
- Technology management for supply chain
 - Supply chain planning, scheduling and control
- Human resource management for supply chains

Articles

Open Submissions Indexed Peer Reviewed

Peer Review Process

All manuscripts will be subject to a well-established, fair, unbiased peer review and refereeing procedure, and are considered on the basis of their significance, novelty and usefulness to the Journals readership. The review output will be either accept or reject. A paper once rejected will not be considered again for review. The review process may take approximately 4-6 months to be completed. For accepted paper, should authors be requested by the editor to revise the text and minor changes, the revised version should be submitted within 15 days

Open Access Policy

This journal provides immediate open access to its content on the principle that making research freely available to the public supports a greater global exchange of knowledge.

Archiving

This journal utilizes the LOCKSS system to create a distributed archiving system among participating libraries and permits those libraries to create permanent archives of the journal for purposes of preservation and restoration. More...

Publications Ethics

Publication Ethics and Publication Malpractice Statement

Our publication ethics and publication malpractice statement is mainly based on the Code of Conduct and Best-Practice Guidelines for Journal Editors (Committee on Publication Ethics, 2011).

I. Responsibilities of Editorial Board

1.1 Publication Decisions

The editorial board is responsible for deciding which of the papers submitted to the journal will be published. The Editor-in-Chief's decision to accept or reject a paper for publication is based on its importance, originality, clarity, and its relevance to the scope of the journal.

1.2 Fair Play

The Editorial Board and the reviewers evaluate manuscripts for their intellectual content without regard to the author's race, ethnicity, gender, sexual orientation, religious beliefs, citizenship, or political ideology.

1.3 Confidentiality

The Editorial Board must ensure that all material submitted to the journal remains confidential while under review. The editorial board and the editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisers, and the publisher, as appropriate.

1.4 Disclosure and Conflicts of Interest

Unpublished materials disclosed in a submitted paper will not be used by the editor or the members of the editorial board for their own research purposes without the author's explicit written consent.

3.4 Multiple, Redundant or Concurrent Publication

In general, papers describing essentially the same research should not be published in more than one journal. Submitting the same paper to more than one journal constitutes unethical publishing behavior and is unacceptable. Manuscripts which have been published as copyrighted material elsewhere cannot be submitted. In addition, manuscripts under review by the journal should not be resubmitted to copyrighted publications.

3.5 Acknowledgement of Sources

Proper acknowledgment of the work of others must always be given. Authors should cite publications that have been influential in determining the nature of the reported work. Information obtained privately, as in conversation, correspondence, or discussion with third parties, must not be used or reported without explicit, written permission from the source. Information obtained in the course of confidential services, such as refereeing manuscripts or grant applications, must not be used without the explicit written permission of the author of the work involved in these services.

3.6 Authorship of the Paper

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors.

The corresponding author ensures that all contributing co-authors and no uninvolved persons are included in the author list. The corresponding author will also verify that all co-authors have approved the final version of the paper and have agreed to its submission for publication.

3.7 Disclosure and Conflicts of Interest

All authors should include a statement disclosing any financial or other substantive conflicts of interest that may be construed to influence the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed.

3.8 Fundamental Errors in Published Works

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author's obligation to promptly notify the journal editor or publisher and to cooperate with the editor to retract or correct the paper in form of an erratum.
