ABSTRACT

This research examines the effect of dividend policy, profitability, and firm size on firm value. Profitability was measured by Return On Assets (ROA), dividend policy was measured by Dividend Per Share (DPS), and firm size was referred to as total asset (Size). Meanwhile, firm value was measured by Price to Book Value (PBV).

The research applies quantitatively. Furthermore, the population consists of pharmaceutical companies listed on the Indonesia Stock Exchange (IDX). The data were collected using purposive sampling, in which the sample was based on the criteria given. In line with that, 7 pharmaceutical companies were the samples. The data were taken for 7 years (2020-2024). Therefore, there were 35 total data samples. Moreover, the data were analysed using multiple linear regression with SPSS.

The result shows that profitability, dividend policy, and firm size have a positive effect on firm value.

Keywords: *profitability, dividend policy, firm size, and firm value.*
